- support for up to 1536 cards or pendants
- integrated LED display
- possibility to program from computer
- possibility of controlling the magnetic keeper or electric strike (CDN-Pk module)

INSPIRO autonomous devices are made of stainless steel. The aesthetics of our devices has been designed to meet expectations of the most demanding customers. Minimalistic design and maximal functionality, thanks to the wide variety of versions, make our products unique in the market.

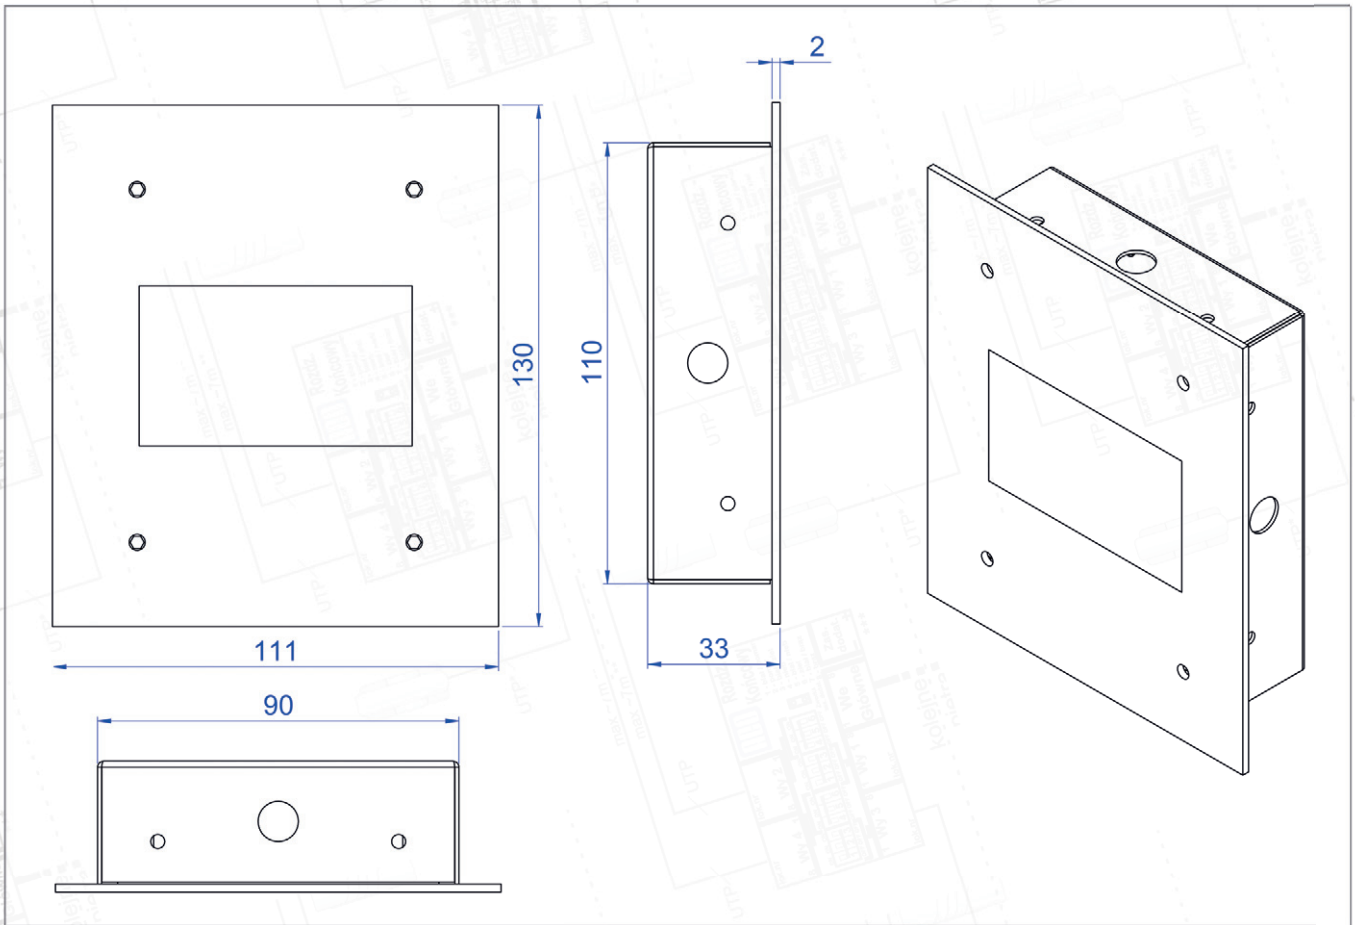

The devices are fully adapted for blind and deaf individuals.

Wide configuration possibilities and programming from the level of both, the computer and the device's keyboard are the reasons for using our products in numerous investments.

Our panels are easy to install and intuitive to configure. The products are resistant to atmospheric factors and vandalism.

All the devices produced by ACO are mutually compatible.
